

# Architecture

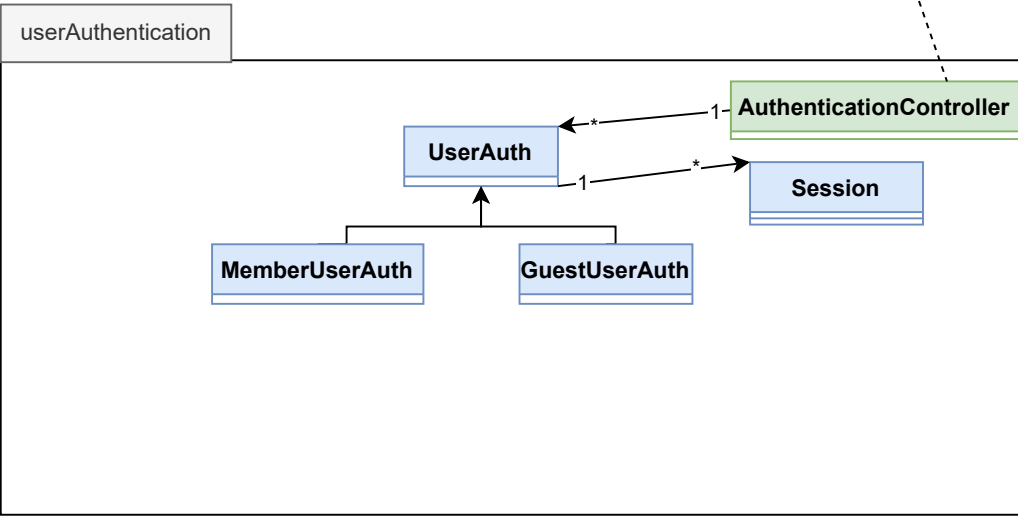

In more detail:  
**UserAuthComponent** interacts with: nobody  
**JobsComponent** interacts with: UserAuthComponent, PurchaseHistoryComponent  
**PurchaseHistoryComponent** interacts with: JobsComponent, StoresComponent, UsersComponent  
**UsersComponent** interacts with: UserAuthComponent, StoresComponent, PurchaseHistoryComponent  
**StoresComponent** interacts with: JobsComponent, PurchasesHistoryComponent, AuthComponent

As mentioned above, components can interact with each other through an interface

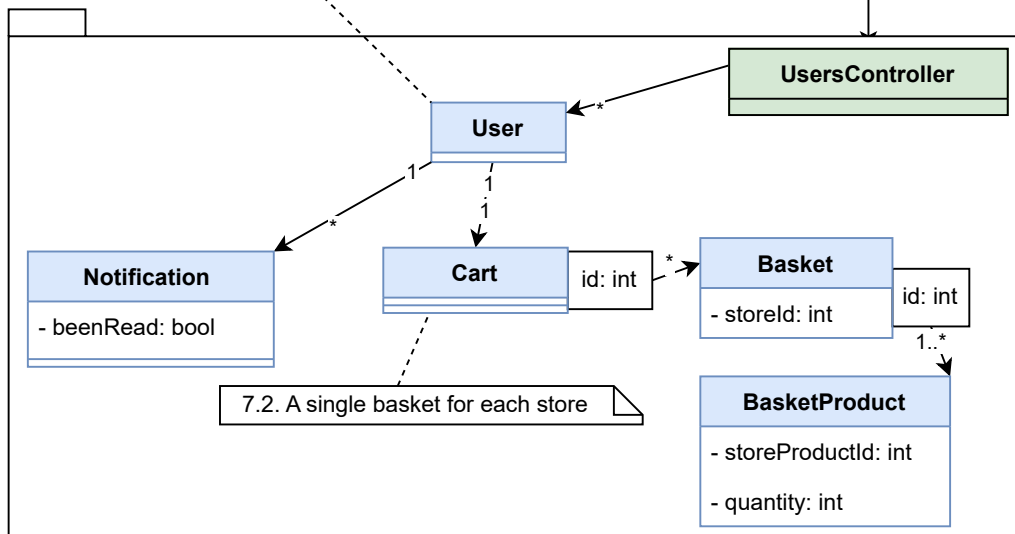

- 1. Each user has an identifier
- 4. Actions are being done only

by users

7.1. User has a single cart  
8. Cart can be modified only by the user himself

6. Discounts and constraints of purchase  
9. Purchase only by the available amount
